# Next Generation Sunshine State Standards

The Next Generation Sunshine State Standards for science are organized *by grade level* for grades K-8 and *by Bodies of Knowledge* for grades 9-12. Eighteen Big Ideas are encompassed in grades K-12 and build in rigor and depth as students advance. Each grade level includes benchmarks from the four Bodies of Knowledge (Nature of Science, Life Science, Earth and Space Science, and Physical Science).

## Kindergarten Overview

**Kindergarten focuses instructional delivery for science within the following eight (8) Big Ideas/Standards:**

### **Nature of Science**

Big Idea 1 – The Practice of Science

### **Earth and Space Science**

Big Idea 5 – Earth in Space and Time

### **Physical Science**

Big Idea 8 – Properties of Matter

Big Idea 9 – Changes in Matter

Big Idea 10 – Forms of Energy

Big Idea 12 – Motion of Objects

Big Idea 13 – Forces and Changes in Motion

### **Life Science**

Big Idea 14 – Organization and Development of Living Organisms

# Kindergarten

## Instructional Scope and Sequence

<b>Weeks of Instruction</b>	<b>Instructional Scope</b>	<b>Instructional Sequence</b>	<b>Body of Knowledge</b>
<b>Weeks 1 – 9</b>	<b>Practice of Science</b>	<b>August 24 – October 22</b>	<b>Nature of Science Life Science</b>
<b>Weeks 10 – 14</b>	<b>Matter</b>	<b>October 26 – November 24</b>	<b>Physical Science Earth and Space Science</b>
<b>Week 15</b>	<b>Energy</b>	<b>November 30 – December 4</b>	
<b>Weeks 16 – 20</b>	<b>Force &amp; Motion</b>	<b>December 7 – January 22</b>	
<b>Weeks 21 – 24</b>	<b>Day &amp; Night Sky</b>	<b>January 25 – February 19</b>	<b>Earth and Space Science</b>
<b>Weeks 25 – 36</b>	<b>Plants &amp; Animals</b>	<b>February 22 – May 20</b>	<b>Life Science</b>
<b>Weeks 37 – 39</b>	<b>Enrichment</b>	<b>May 23 – June 7</b>	<b>Nature of Science/ Life/Earth and Space/Physical</b>

Formative Assessment Strategies are included on pages 33-42.  
Digital Program Access Information is included on page 43.

# MAKING CONNECTIONS

Health (NGSSS) / Language Arts (LAFS) / Mathematics (MAFS) / Technology (ISTE)

## HEALTH

HE.K.C.1.5

### Students will:

Recognize there are body parts inside and outside of the body.

## LANGUAGE ARTS

LAFS.K.RI.1.1

### Students will:

With prompting and support, ask and answer questions about key details in a text.

LAFS.K.RI.2.4

With prompting and support, ask and answer questions about unknown words in a text.

LAFS.K.RI.4.10

Actively engage in group reading activities with purpose and understanding.

LAFS.K.SL.1.1

Participate in collaborative conversations with diverse partners about *kindergarten topics* and texts with peers and adults in small and larger groups.

a. Follow agreed-upon rules for discussions (e.g., listening to others and taking turns speaking about the topics and texts under discussion).

b. Continue a conversation through multiple exchanges.

LAFS.K.W.3.8

With guidance and support from adults, recall information from experiences or gather information from provided sources to answer a question.

## MATHEMATICS

MAFS.K.MD.1.2

### Students will:

Directly compare two objects with a measurable attribute in common, to see which object has “more of/”less of” the attribute, and describe the difference. *For example, directly compare the heights of two children and describe one child as taller/shorter.*

MAFS.K.MD.2.3

Classify objects into given categories; count the numbers of objects in each category and sort the categories by count.

## TECHNOLOGY

Creativity and innovation

### Students will:

Demonstrate creative thinking, construct knowledge, and develop innovative products and processes using technology.

Communication and collaboration

Use digital media and environments to communicate and work collaboratively, including at a distance, to support individual learning and contribute to the learning of others.

Research and informational fluency

Apply digital tools to gather, evaluate, and use information.

Critical thinking, problem solving, and decision making

Use critical thinking skills to plan and conduct research, manage projects, solve problems, and make informed decisions using appropriate digital tools and resources.

Digital Citizenship

Understand human, cultural, and societal issues related to technology and practice legal and ethical behavior.

Technology operations and concepts

Demonstrate a sound understanding of technology concepts, systems, and operations.

# MAKING CONNECTIONS

## Standards for Mathematical Practice

### Students will:

#### **Make sense of problems and persevere in solving them. (SMP.1)**

Solving a mathematical problem involves making sense of what is known and applying a thoughtful and logical process which sometimes requires perseverance, flexibility, and a bit of ingenuity.

#### **Reason abstractly and quantitatively. (SMP.2)**

The concrete and the abstract can complement each other in the development of mathematical understanding: representing a concrete situation with symbols can make the solution process more efficient, while reverting to a concrete context can help make sense of abstract symbols.

#### **Construct viable arguments and critique the reasoning of others. (SMP.3)**

A well-crafted argument/critique requires a thoughtful and logical progression of mathematically sound statements and supporting evidence.

#### **Model with mathematics. (SMP.4)**

Many everyday problems can be solved by modeling the situation with mathematics.

#### **Use appropriate tools strategically. (SMP.5)**

Strategic choice and use of tools can increase reliability and precision of results, enhance arguments, and deepen mathematical understanding.

#### **Attend to precision. (SMP.6)**

Attending to precise detail increases reliability of mathematical results and minimizes miscommunication of mathematical explanations.

#### **Look for and make use of structure. (SMP.7)**

Recognizing a structure or pattern can be the key to solving a problem or making sense of a mathematical idea.

#### **Look for and express regularity in repeated reasoning. (SMP.8)**

Recognizing repetition or regularity in the course of solving a problem (or series of similar problems) can lead to results more quickly and efficiently.

# Science Process Skills: Basic and Integrated

## BASIC

- Observing:** using your senses to gather information about an object or event; a description of what is actually perceived; information that is considered to be qualitative data
- Measuring:** using standard measures or estimations to describe specific dimensions of an object or event; information considered to be quantitative data
- Inferring:** formulating assumptions or possible explanations based upon observations
- Classifying:** grouping or ordering objects or events into categories based upon characteristics or defined criteria
- Predicting:** guessing the most likely outcome of a future event based upon a pattern of evidence
- Communicating:** using words, symbols, or graphics to describe an object, action, or event

## INTEGRATED

- Formulating Hypotheses:** stating the proposed solutions or expected outcomes for experiments; proposed solutions to a problem must be testable
- Identifying Variables:** stating the changeable factors that can affect an experiment; important to change only the variable being tested and keep the rest constant
- Defining Variables:** explaining how to measure a variable in an experiment
- Designing Investigations:** designing an experiment by identifying materials and describing appropriate steps in a procedure to test a hypothesis
- Experimenting:** carrying out an experiment by carefully following directions of the procedure so the results can be verified by repeating the procedure several times
- Acquiring Data:** collecting qualitative and quantitative data as observations and measurements
- Organizing Data:** making data tables and graphs for data collected
- Analyzing Investigations:** interpreting data, identifying errors, evaluating the hypothesis, formulating conclusions, and recommending further testing when necessary

# 5E Learning Cycle: An Instructional Model

ENGAGEMENT	EXPLORATION	EXPLANATION	ELABORATION	EVALUATION
<p>The engagement phase of the model is intended to capture students' interest and focus their thinking on the concept, process, or skill that is to be learned.</p> <p>During this engagement phase, the teacher is on center stage.</p>	<p>The exploration phase of the model is intended to provide students with a common set of experiences from which to make sense of the concept, process or skill that is to be learned.</p> <p>During the exploration phase, the students come to center stage.</p>	<p>The explanation phase of the model is intended to grow students' understanding of the concept, process, or skill and its associated academic language.</p> <p>During the explanation phase, the teacher and students share center stage.</p>	<p>The elaboration phase of the model is intended to construct a deeper understanding of the concept, process, or skill through the exploration of related ideas.</p> <p>During the elaboration phase, the teacher and students share center stage.</p>	<p>The evaluation phase of the model is intended to be used during all phases of the learning cycle driving the decision-making process and informing next steps.</p> <p>During the evaluation phase, the teacher and students share center stage.</p>
<p><b>What does the teacher do?</b></p> <ul style="list-style-type: none"> <li>• <b>create</b> interest/curiosity</li> <li>• <b>raise</b> questions</li> <li>• <b>elicit</b> responses that uncover student thinking/prior knowledge (preview/process)</li> <li>• <b>remind</b> students of previously taught concepts that will play a role in new learning</li> <li>• <b>familiarize</b> students with the unit</li> </ul>	<p><b>What does the teacher do?</b></p> <ul style="list-style-type: none"> <li>• <b>provide</b> necessary materials/tools</li> <li>• <b>pose</b> a hands-on/minds-on problem for students to explore</li> <li>• <b>provide</b> time for students to "puzzle" through the problem</li> <li>• <b>encourage</b> students to work together</li> <li>• <b>observe</b> students while working</li> <li>• <b>ask</b> probing questions to redirect student thinking as needed</li> </ul>	<p><b>What does the teacher do?</b></p> <ul style="list-style-type: none"> <li>• <b>ask</b> for justification/clarification of newly acquired understanding</li> <li>• <b>use</b> a variety of instructional strategies</li> <li>• <b>use</b> common student experiences to: <ul style="list-style-type: none"> <li>○ develop academic language</li> <li>○ explain the concept</li> </ul> </li> <li>• <b>use</b> a variety of instructional strategies to grow understanding</li> <li>• <b>use</b> a variety of assessment strategies to gauge understanding</li> </ul>	<p><b>What does the teacher do?</b></p> <ul style="list-style-type: none"> <li>• <b>provide</b> new information that extends what has been learned</li> <li>• <b>provide</b> related ideas to explore</li> <li>• <b>pose</b> opportunities (examples and non-examples) to apply the concept in unique situations</li> <li>• <b>remind</b> students of alternate ways to solve problems</li> <li>• <b>encourage</b> students to persevere in solving problems</li> </ul>	<p><b>What does the teacher do?</b></p> <ul style="list-style-type: none"> <li>• <b>observe</b> students during all phases of the learning cycle</li> <li>• <b>assess</b> students' knowledge and skills</li> <li>• <b>look</b> for evidence that students are challenging their own thinking</li> <li>• <b>present</b> opportunities for students to assess their learning</li> <li>• <b>ask</b> open-ended questions: <ul style="list-style-type: none"> <li>○ What do you think?</li> <li>○ What evidence do you have?</li> <li>○ How would you explain it?</li> </ul> </li> </ul>
<p><b>What does the student do?</b></p> <ul style="list-style-type: none"> <li>• <b>show</b> interest in the topic</li> <li>• <b>reflect and respond</b> to questions</li> <li>• <b>ask</b> self-reflection questions: <ul style="list-style-type: none"> <li>○ What do I already know?</li> <li>○ What do I want to know?</li> <li>○ How will I know I have learned the concept, process, or skill?</li> </ul> </li> <li>• <b>make</b> connections to past learning experiences</li> </ul>	<p><b>What does the student do?</b></p> <ul style="list-style-type: none"> <li>• <b>manipulate</b> materials/tools to explore a problem</li> <li>• <b>work</b> with peers to make sense of the problem</li> <li>• <b>articulate</b> understanding of the problem to peers</li> <li>• <b>discuss</b> procedures for finding a solution to the problem</li> <li>• <b>listen</b> to the viewpoint of others</li> </ul>	<p><b>What does the student do?</b></p> <ul style="list-style-type: none"> <li>• <b>record</b> procedures taken towards the solution to the problem</li> <li>• <b>explain</b> the solution to a problem</li> <li>• <b>communicate</b> understanding of a concept orally and in writing</li> <li>• <b>critique</b> the solution of others</li> <li>• <b>comprehend</b> academic language and explanations of the concept provided by the teacher</li> <li>• <b>assess</b> own understanding through the practice of self-reflection</li> </ul>	<p><b>What does the student do?</b></p> <ul style="list-style-type: none"> <li>• <b>generate</b> interest in new learning</li> <li>• <b>explore</b> related concepts</li> <li>• <b>apply</b> thinking from previous learning and experiences</li> <li>• <b>interact</b> with peers to broaden one's thinking</li> <li>• <b>explain</b> using information and experiences accumulated so far</li> </ul>	<p><b>What does the student do?</b></p> <ul style="list-style-type: none"> <li>• <b>participate</b> actively in all phases of the learning cycle</li> <li>• <b>demonstrate</b> an understanding of the concept</li> <li>• <b>solve</b> problems</li> <li>• <b>evaluate</b> own progress</li> <li>• <b>answer</b> open-ended questions with precision</li> <li>• <b>ask</b> questions</li> </ul>
<p><b>Evaluation of Engagement</b></p> <p>The role of evaluation during the engagement phase is to gain access to students' thinking during the pre-assessment event/activity. Conceptions and misconceptions currently held by students are uncovered during this phase. These outcomes determine the concept, process, or skill to be explored in the next phase of the learning cycle.</p>	<p><b>Evaluation of Exploration</b></p> <p>The role of evaluation during the exploration phase is to gather an understanding of how students are progressing towards making sense of a problem and finding a solution. Strategies and procedures used by students during this phase are highlighted during explicit instruction in the next phase. The concept, process, or skill is formally explained in the next phase of the learning cycle.</p>	<p><b>Evaluation of Explanation</b></p> <p>The role of evaluation during the explanation phase is to determine the students' degree of fluency (accuracy and efficiency) when solving problems. Conceptual understanding, skill refinement, and vocabulary acquisition during this phase are enhanced through new explorations. The concept, process, or skill is elaborated in the next phase of the learning cycle.</p>	<p><b>Evaluation of Elaboration</b></p> <p>The role of evaluation during the elaboration phase is to determine the degree of learning that occurs following a differentiated approach to meeting the needs of all learners. Application of new knowledge in unique problem solving situations during this phase constructs a deeper and broader understanding. The concept, process, or skill has been and will be evaluated as part of all phases of the learning cycle.</p>	

# Webb's Depth of Knowledge (DOK) Model of Cognitive Complexity

<b>LOW COMPLEXITY</b>	<b>MODERATE COMPLEXITY</b>	<b>HIGH COMPLEXITY</b>	<b>HIGH COMPLEXITY</b>
<p style="text-align: center;"><b>Level 1</b> (Recall)</p> <p>This level is the recall of information such as a fact, definition, or term, as well as performing a simple science process or procedure. Level 1 only requires students to demonstrate a rote response, use a well-known formula, follow a set, well-defined procedure (like a recipe), or perform a clearly defined series of steps.</p> <p><b>Some examples are:</b></p> <ul style="list-style-type: none"> <li>Recall or recognize a fact, term, or property.</li> <li>Represent a scientific concept or relationship in words or diagrams.</li> <li>Provide or recognize a standard scientific representation for simple phenomena.</li> <li>Perform a routine procedure, such as measuring length.</li> <li>Identify familiar forces (e.g., pushes, pulls, gravitation, friction, etc.).</li> <li>Identify objects and materials as solids, liquids, and gases.</li> </ul>	<p style="text-align: center;"><b>Level 2</b> (Basic Application of Concepts and Skills)</p> <p>This level includes the engagement of some mental processing beyond recalling or reproducing a response. The content knowledge or process involved is more complex than in Level 1. Level 2 requires that students make some decisions as to how to approach the question or problem. Level 2 activities include making observations, and collecting data; classifying, organizing, and comparing data; and representing and displaying data in tables, graphs, and charts.</p> <p><b>Some examples are:</b></p> <ul style="list-style-type: none"> <li>Specify and explain the relationships among facts, terms, properties, and variables.</li> <li>Identify variables, including controls, in simple experiments.</li> <li>Distinguish between experiments and systematic observations.</li> <li>Describe and explain examples and non-examples of science concepts.</li> <li>Select a procedure according to specified criteria, and perform it.</li> <li>Formulate a routine problem given data and conditions.</li> <li>Organize and represent data.</li> </ul>	<p style="text-align: center;"><b>Level 3</b> (Strategic Thinking &amp; Complex Reasoning)</p> <p>This level requires reasoning, planning, using evidence, and a higher level of thinking than the previous two levels. The cognitive demands at Level 3 are complex and abstract because the multi-step task requires more demanding reasoning than Level 2. Level 3 activities include drawing conclusions from observations; citing evidence and developing a logical argument for concepts; explaining phenomena in terms of concepts; and using concepts to solve non-routine problems.</p> <p><b>Some examples are:</b></p> <ul style="list-style-type: none"> <li>Identify research questions and design investigations for a scientific problem.</li> <li>Design and execute an experiment or systematic observation to test a hypothesis or research question.</li> <li>Develop a scientific model for a complex situation.</li> <li>Form conclusions from experimental data.</li> <li>Cite evidence that living systems follow the laws of conservation of mass and energy.</li> <li>Explain the physical properties of the sun and its dynamic nature and connect them to conditions and events on Earth.</li> </ul>	<p style="text-align: center;"><b>Level 4</b> (Extended Thinking &amp; Complex Reasoning)</p> <p>This level has the same high cognitive demands as Level 3 with the additional requirement that students work over an extended period of time or with extended effort. Students are required to make several connections—relating ideas within the content area or among content areas—and have to select or devise one approach among many alternatives for how the situation or problem can be solved. It is important to note that the extended time period is not a distinguishing factor if the required work is only repetitive and does not require the application of significant conceptual understanding and higher-order thinking.</p> <p><b>Some examples are:</b></p> <ul style="list-style-type: none"> <li>Based on provided data from a complex experiment that is novel to the student, deduce the fundamental relationship among several variables.</li> <li>Conduct an investigation, from specifying a problem to designing and carrying out an experiment and analyzing data and forming conclusions.</li> <li>Produce a detailed report of a scientific experiment or systematic observation, and infer conclusions based upon evidence obtained.</li> </ul>

More detailed information about Florida's DOK levels is available online at <http://www.cpalms.org/cpalms/dok.aspx>.

### Level 1

#### Recall or Reproduction...

is the recall of information such as a fact, definition, or term as well as performing a simple science process or procedure. Level 1 only requires students to demonstrate a rote response, restate information in their own words, and/or follow or perform a well-defined procedure.

#### Some Examples of Level 1 Performance

- Recall or recognize a fact, term, or property (e.g., how speed is determined).
- Represent a scientific concept or relationship in words or diagrams.
- Retrieve information from a chart, table, diagram, or graph.
- Recognize a standard scientific representation of a simple phenomenon (e.g., water cycle model).
- Identify common examples of topics, objects, and materials (e.g., familiar forces and invertebrates).
- Perform a routine procedure such as measuring length.

#### Question Stems

- What is (was) \_\_\_\_\_?
- What \_\_\_\_\_ did you use?
- What are some examples of \_\_\_\_\_?
- How many \_\_\_\_\_?
- Identify the \_\_\_\_\_?
- Make a listing of \_\_\_\_\_?
- Why did you choose \_\_\_\_\_?
- How would you describe \_\_\_\_\_?
- How can you recognize \_\_\_\_\_?
- When did \_\_\_\_\_ happen?
- Recall what happened.
- What happened when \_\_\_\_\_?
- Retell.
- Draw.
- Select or retrieve \_\_\_\_\_?
- What data represents \_\_\_\_\_?
- Which \_\_\_\_\_ has the most? Least?
- Read your data table, chart, or graph.
- Is \_\_\_\_\_ on the graph?
- What pattern is seen when \_\_\_\_\_?

### Level 2

#### Basic Application...

is engaging in a mental process that goes beyond basic recall or reproduction, requiring two or more steps before giving a response. Students are asked to apply their knowledge of content on a simple level. Level 2 requires student to make some decisions as to how to approach a question or problem such as to classify, organize, and compare data.

#### Some Examples of Level 2 Performance

- Read and interpret information from a simple graph.
- Designate and explain the relationships among facts, terms, properties, and variables (e.g., compare physical properties of solids, liquids, and gases).
- Identify variable and controls in simple experiments.
- Distinguish between experiments and systematic observations.
- Describe and explain examples and non-examples of science concepts (e.g., flowering and non-flowering plants).
- Select a procedure according to specified criteria, and perform it.
- Formulate a routine problem given data and conditions.

#### Question Stems

- Explain how \_\_\_\_\_ affected \_\_\_\_\_.
- Apply what you have learned to \_\_\_\_\_.
- Compare/contrast.
- How would you classify \_\_\_\_\_?
- What could you use to classify?
- How are \_\_\_\_\_ alike? Different?
- Summarize.
- What do you notice about \_\_\_\_\_?
- What do you observe? Infer?
- What are some examples of \_\_\_\_\_?
- What are some non-examples of \_\_\_\_\_?
- Given the data, what was the testable question?
- What variable is being tested?
- What is the control group?
- What procedure would you use?

### **Level 3**

#### Strategic Thinking...

requires reasoning, planning, using evidence, and complex and abstract thinking. The complexity results from there being multiple correct responses in which student justification is necessary and thorough. Level 3 asks students to cite evidence when developing a logical argument and to explain scientific phenomena in terms of concepts.

#### **Some Examples of Level 3 Performance**

- Design and execute an experiment or systematic observation to test a hypothesis or research question.
- Design and develop a scientific model to explain a scientific concept or theory.
- Form conclusions from experimental data.
- Cite evidence for scientific theory (e.g., energy is neither lost nor created within food chains and electrical circuits).
- Compare information within or across data sets (several monthly temperature graphs of the same city).
- Explain how political, social, and economic concerns can affect science, and vice versa.
- Explain the properties of the sun and its position within the solar system and then connect this knowledge to the condition and events occurring on Earth.

#### **Question Stems**

- What conclusions can you draw?
- How would you test \_\_\_\_\_?
- What would the outcome be if \_\_\_\_\_?
- What features of the graph should be considered when \_\_\_\_\_?
- What question could we ask now?
- What evidence should be considered?
- Explain your thinking when there is more than one answer. Elaborate.
- Formulate a reason as to why \_\_\_\_\_?
- Which facts support \_\_\_\_\_?
- What is the best answer? Why?
- How would you adapt \_\_\_\_\_ to create a different \_\_\_\_\_?
- How is \_\_\_\_\_ related to \_\_\_\_\_?

### **Level 4**

#### Extended Thinking...

requires the same high cognitive demands as Level 3 with the additional requirement that students work over an extended period of time and/or with extended effort. Level 4 assessment items require significant thought.

#### **Some Examples of Level 4 Performance**

- Relate scientific concepts to other content areas (e.g., impact of environment changes).
- Develop generalizations of the results obtained and apply them to new situations (e.g., predict the weather in a particular place and time).
- Select or devise an approach among many alternatives for how a situation or problem is to be solved.
- Analyze multiple sources of evidence.
- Apply understanding in a new way, provide argument or justification for the application (e.g., using inertia).
- Conduct an investigation, from specifying a problem to designing and carrying out an experiment and analyzing data and forming conclusions.

#### **Question Stems/Tasks**

- What information can you gather to support your idea about \_\_\_\_\_?
- Apply information from one text to another text to develop a persuasive argument.
- Write a research paper/thesis on a topic from multiple sources.
- Judge the value of material for a given purpose. Consider multiple lines of inquiry to explain a particular scientific theory (e.g., conservation of mass and inertia).
- Produce a detailed report of a scientific experiment or systematic observation, and infer conclusions based upon evidence obtained.
- Provide time for extended thinking.
- Assess through performance and open-ended activities.

Topics	Learning Targets/Skills	Benchmarks	Vocabulary
<p><b>Weeks 1-2</b></p> <p><b>Introduction to Science</b></p>	<p><i>Collaborate with a partner to collect information.</i></p> <p><b>Students will:</b></p> <ul style="list-style-type: none"> <li>• <b>develop</b> a science notebook (whole class and/or individual) that will be used all year long to document learning (e.g., observations, measurements, pictures, vocabulary).</li> <li>• <b>discuss</b> scientific tools (e.g., beaker, graduated cylinder, measuring cup, thermometer, hand lens, goggles) that scientists use to make their work easier.</li> <li>• <b>draw</b> a picture of what a scientist looks like and present it to classmates and the teacher.</li> <li>• <b>collaborate</b> with a partner to collect information from an activity (e.g., name objects seen in a picture, draw pictures of things seen on a walk around the schoolyard, sort a pile of common things found in the classroom or things found in nature, find the length of objects using popsicle sticks).</li> </ul>	<p><b>SC.K.N.1.1</b></p>	<p>answers                      collect                      partner                      problem                      question                      science                      science notebook                      science tools                      scientist                      sort</p>
<p><b>Teacher Hints for “Introduction to Science”:</b></p> <ul style="list-style-type: none"> <li>• Digital textbook resources can be accessed through V-Portal or at <a href="http://www.thinkcentral.com">www.thinkcentral.com</a>. See page 43 for access information.</li> <li>• Interactive notebooks can be developed whole class and/or individually. Developing a whole-class notebook gives the teacher the opportunity to model expectations so that the transition to using individual science notebooks is easier later in the school year.</li> <li>• A junk box consisting of items commonly found in your classroom can be used over and over for sorting activities. Beans, buttons, shells, rocks, coins, blocks, nuts/bolts, crayons, and toy cars are easy real-world objects to acquire for sorting activities.</li> <li>• Non-standard units of measure (e.g., pretzel sticks, marbles) will be used when determining the length and weight of objects in grade K.</li> </ul>			
<p><b>Weeks 3-7</b></p> <p><b>Five Senses</b></p> <p>Sight</p> <p>This topic is continued on the next page.</p>	<p><i>Recognize the five senses and related body parts.</i></p> <p><b>Students will:</b></p> <ul style="list-style-type: none"> <li>• <b>name</b> <i>sight</i> as one of the five senses.</li> <li>• <b>identify</b> that the eyes correspond to the sense of sight (on their own body and through pictures).</li> <li>• <b>describe</b> objects by using the sense of sight ONLY (color, shape, size).</li> <li>• <b>explore</b> how light impacts sight.</li> <li>• <b>explore</b> tools that scientists use to enhance, and sometimes hinder, the sense of sight for the purpose of protection (e.g., goggles, hand lens, microscope, glasses, sunglasses, binoculars).</li> </ul>	<p><b>SC.K.L.14.1</b></p> <p>Embedded                      Nature of Science                      SC.K.N.1.1</p>	<p>eyes                      five senses                      goggles                      hand lens                      observation                      sight</p>

<p><b>Weeks 3-7</b></p> <p><b>Five Senses</b></p> <p>Touch Hearing Smell Taste</p>	<p><b>Students will:</b></p> <ul style="list-style-type: none"> <li>• <b>name</b> <i>touch</i> as one of the five senses.</li> <li>• <b>identify</b> that the fingers and skin correspond to the sense of touch.</li> <li>• <b>describe</b> the feel (texture) of objects using the sense of touch (e.g., soft, hard, cold, warm, sticky, rough, smooth).</li> <li>• <b>determine</b> a hidden object by its feel (e.g., feely box, feely socks, feely bag).</li> <li>• <b>explore</b> tools that scientists use to reduce, and sometimes eliminate, the sense of touch for the purpose of protection (e.g., gloves, oven mitts, shoes, tongs, forceps).</li> </ul>	<p><b>SC.K.L.14.1</b></p> <p>Embedded Nature of Science SC.K.N.1.1</p>	<p>fingers skin texture <b>touch (feel)</b> bitter ears hear nose salty smell sound sour sweet taste tongue waft</p>
	<p><b>Students will:</b></p> <ul style="list-style-type: none"> <li>• <b>name</b> <i>hearing</i> as one of the five senses.</li> <li>• <b>identify</b> that the ears correspond to the sense of hearing.</li> <li>• <b>describe</b> the sound an object can make (e.g., low/high pitch-thud and screech, loud/soft volume-siren and whisper, tweet, buzz, beep).</li> <li>• <b>determine</b> a mystery sound (e.g., recordings, mystery sound box/bag).</li> <li>• <b>determine</b> the location of real-world sounds heard during a sound walk around the school campus.</li> <li>• <b>explore</b> tools that reduce and enhance the sense of hearing (e.g., hands, head phones, ear plugs, hearing aide, stethoscope, cup telephones).</li> </ul>		
	<p><b>Students will:</b></p> <ul style="list-style-type: none"> <li>• <b>name</b> <i>smell</i> as one of the five senses.</li> <li>• <b>identify</b> that the nose corresponds to the sense of smell.</li> <li>• <b>use</b> the proper technique for smelling substances (wafting).</li> <li>• <b>identify and describe</b> the smell of different mystery substances.</li> </ul>		
	<p><b>Students will:</b></p> <ul style="list-style-type: none"> <li>• <b>name</b> <i>taste</i> as one of the five senses.</li> <li>• <b>identify</b> that the tongue corresponds to the sense of taste.</li> <li>• <b>describe</b> the taste of different substances (sour, sweet, bitter, salty).</li> <li>• <b>explore</b> the relationship between smell and taste.</li> </ul>		

**Teacher Hints for “Five Senses”:**

- The sense of sight is the most developed sense in humans.
- Students can discover that light is necessary for objects to be seen.
- The sense of touch is not highly developed in students of this age.
- A description of how something feels is relative making this a difficult task for some students.
- Hearing is the sense that is second only to sight in the degree of development in humans.
- The descriptions of sound may include, but are not limited to, the following: loud, soft, ringing, clanging, beeping, squawking, dripping, howling.
- Wafting is a safe method of smelling substances by fanning your hand over the substance pulling the smell towards your nose.
- Tasting in science is a safety issue. Continually impress upon children the need to never taste a substance unless specifically instructed to do so.
- Taste is a sense that relies heavily on the sense of smell. Try holding your nose and tasting an unknown flavor of life saver. Make a prediction of what flavor it is. Let go of your nose and make another prediction. Check to see if your prediction was correct.

<p><b>Weeks 8-9</b></p> <p><b>Investigations Using Five Senses</b></p>	<p><i>Make observations of the natural world and know that they are descriptors collected using the five senses.</i></p> <p><i>Recognize that learning can come from careful observation.</i></p> <p><b>Students will:</b></p> <ul style="list-style-type: none"> <li>• <b>explore</b> basic science process skills with a partner that are important to a scientist through hands-on investigations (e.g., observing, sorting, predicting, comparing, measuring, communicating).</li> <li>• <b>explore</b> the hands-on use of science tools with a partner (e.g., hand lens, thermometer, balance, measuring cup, beaker, ruler, meter stick, timer) that help scientists gather information about the world around them.</li> <li>• <b>observe and describe</b> familiar things from the natural world using the five senses (e.g., plants, animals, rocks, sky, weather).</li> <li>• <b>observe and describe</b> a familiar, man-made object using the five senses (e.g., plastic fork, marker, chair, baseball bat, mitten).</li> <li>• <b>list</b> new things learned after making careful observations and hearing the observations of others.</li> <li>• <b>identify and describe</b> the roles the senses play in a given situation (e.g., sitting around a campfire, riding a bike, playing at the beach, popping corn in an air popper, making applesauce, using scented and colorful play dough).</li> <li>• <b>ask questions and find answers</b> about the world around them using their five senses.</li> </ul>	<p><b>SC.K.N.1.2</b></p> <p><b>SC.K.N.1.5</b></p> <p>Embedded Nature of Science SC.K.N.1.1</p>	<p>answers ask balance beaker communicate compare describe find explore hand lens measure measuring cup yard/meter stick observation observe predict question ruler science tools sort thermometer timer</p>
<p><b>Teacher Hints for “Investigations Using Five Senses”:</b></p> <ul style="list-style-type: none"> <li>• Descriptions of the basic science process skills (inquiry) can be found on page 8.</li> <li>• Observation is the foundation of the science processes. Initial information about an object comes from the sense of sight.</li> <li>• Making observations in a science classroom includes the use of all five senses (when appropriate). Help students avoid the misconception that observations only include what they can see.</li> <li>• Students should be purposefully engaged in activities that incorporate multiple senses.</li> <li>• Observations should lead to questions. As students engage in becoming better observers (attention to details), they will also become more curious and ask more questions.</li> <li>• An explanation of what has been learned should include evidence from what has been observed through the use of the five senses. (I learned ____ because I observed ____ by using my sense of ____).</li> <li>• Non-standard units of measure are used in Kindergarten. Students will measure length, volume, weight, and temperature using objects such as cubes, paper clips, pennies, popsicle sticks, pretzels, and marbles.</li> <li>• The following descriptors should be used when describing or comparing length, volume, weight, and temperature: long/short, wide/narrow, tall/short, empty/full, heavy/light, hot/warm/cold.</li> <li>• An explanation of what has been learned should include evidence from what has been “measured” with non-standard units of measure. (I learned ____ because I used ____ to measure ____).</li> <li>• Handling scientific tools such as beakers, rulers, and thermometers (precise measurements not required) to conduct simple investigations will provide students with early experiences that will set them up for success when they begin using standard units of measure (inches and centimeters) in grade 1.</li> </ul>

Topics	Learning Targets/Skills	Benchmarks	Vocabulary
<p><b>Weeks 10-12</b></p> <p><b>Properties of Matter</b></p>	<p><i>Sort objects by observable properties, such as size, shape, color, temperature (hot or cold), weight (heavy or light) and texture.</i></p> <p><i>Keep records as appropriate-such as pictorial records of investigations conducted.</i></p> <p><b>Students will:</b></p> <ul style="list-style-type: none"> <li>• <b>discuss</b> types of observations scientists make (e.g., size, color, temperature, texture, time, quantity, changes to objects).</li> <li>• <b>discuss</b> different ways scientists record their observations during investigations (e.g., notes, charts, illustrations, video).</li> <li>• <b>describe</b> objects by their observable properties after collaborating with a partner (e.g., shape, color, size-big/small/tall/short, weight-heavy/light, texture-soft/hard/rough/smooth, temperature-hot/cold).</li> <li>• <b>sort</b> objects according to an observable property comparing the quantity (more/less) in each group.</li> <li>• <b>re-sort</b> the same objects according to a different observable property comparing the quantity (more/less) in each group.</li> <li>• <b>explain</b> the reasoning of how objects have been sorted and re-sorted.</li> <li>• <b>estimate and compare</b> the sizes of different objects (long/short, tall/short, wide/narrow, thick/thin, big/little).</li> <li>• <b>estimate and compare</b> the weights of different objects (heavier/lighter) using their hands and a pan balance.</li> <li>• <b>estimate and compare</b> the temperature of different objects through touch (hot/warm/cold).</li> <li>• <b>record</b> predictions, observations and results of investigations in pictorial or written form in a science notebook as a whole class and/or as an individual.</li> </ul>	<p><b>SC.K.P.8.1</b></p> <p><b>SC.K.N.1.3</b></p> <p>Embedded Nature of Science SC.K.N.1.1 SC.K.N.1.2 SC.K.N.1.5</p>	<p>estimate heavy investigate light matter pan balance predict property (attribute) record ruler science notebook sort temperature texture weight</p>

**Teacher Hints for “Properties of Matter”:**

- Students are not responsible for being able to distinguish materials as solids, liquids, or gases in Kindergarten (only the material’s properties that can be observed with or without tools).
- A pan balance, ruler, and thermometer can be used to compare the weight, length (including width and height), and temperature of materials. Standard measurement in precise units (inches and centimeters) will be taught in Grade 1 (science).

<p><b>Weeks 13-14</b></p> <p><b>Changes in Matter</b></p>	<p><i>Recognize that the shape of materials such as paper and clay can be changed by cutting, tearing, crumpling, smashing, or rolling.</i></p> <p><i>Observe and create a visual representation of an object which includes its major features.</i></p> <p><b>Students will:</b></p> <ul style="list-style-type: none"> <li>• <b>describe</b> an object, including its major features, using as many of the five senses as possible.</li> <li>• <b>match</b> a description of an object to its 2-dimensional or 3-dimensional visual representation (model).</li> <li>• <b>create</b> a 2-dimensional or 3-dimensional model of an object using paper or clay.</li> <li>• <b>demonstrate</b> multiple ways to change the shape and size of the paper or clay model (e.g., fold, bend, cut, tear, crumple, smash, roll, soak, heat, freeze).</li> <li>• <b>match</b> altered forms of materials to their originals (e.g., ripped up pieces of paper to a full sheet, smashed piece of gum to a piece right out of the wrapper, liquid water to ice).</li> <li>• <b>explain</b> that when these changes are made to paper and clay, only the shape or size of the material changes, not the material itself.</li> <li>• <b>demonstrate</b> how other objects or substances change when heated or cooled (e.g., chocolate, water/ice, crayon).</li> <li>• <b>record</b> observations of the object before and after change in science notebooks.</li> </ul>	<p><b>SC.K.P.9.1</b></p> <p><b>SC.K.N.1.4</b></p> <p>Embedded Nature of Science SC.K.N.1.2 SC.K.N.1.3 SC.K.N.1.5</p>	<p><b>bend</b> <b>change</b> <b>cool</b> <b>crumple</b> <b>cut</b> <b>fold</b> <b>heat</b> <b>model</b> <b>roll</b> <b>smash</b> <b>soak</b> <b>tear</b></p>
<p><b>Teacher Hints for “Changes in Matter”:</b></p> <ul style="list-style-type: none"> <li>• The primary focus of this benchmark is to be able to explain that materials change in many different ways (e.g., size, shape, color, texture, temperature). Students do not need to understand the difference between physical and chemical change even though the textbook provides examples of both.</li> <li>• Physical changes can generally be described by noting the change in size and form of an object.</li> </ul>

Week 15 Sound	<p><i>Observe that things that make sound vibrate.</i></p> <p><b>Students will:</b></p> <ul style="list-style-type: none"> <li><b>distinguish</b> soft sounds from loud sounds (e.g., ringing a bell and sounding a fire alarm, dropping a cotton ball and dropping a wooden block).</li> <li><b>observe</b> that sounds are made when parts of musical objects vibrate (e.g., guitar strings, drums, musical triangles, xylophones, cymbals, tambourines).</li> <li><b>investigate</b> other ways vibrations can be seen and felt (e.g., striking tuning forks and placing in water, plucking rubber bands, feeling vocal cords when speaking, feeling a radio speaker, saying some letter sounds and feeling it on the lips).</li> <li><b>keep records</b> of sound investigations in a science notebook.</li> </ul>	<p><b>SC.K.P.10.1</b></p> <p>Embedded Nature of Science SC.K.N.1.2 SC.K.N.1.3 SC.K.N.1.5</p>	<p>energy loud soft sound vibrate</p>

**Teacher Hints for “Sound”:**

- All sound is made by vibrating matter. Vibrations are back-and-forth movements.
- Vibrations can often be seen and felt.
- Soft and loud sounds refer to the volume (loudness) of sound. High and low sounds refer to pitch. While students do not need to know the difference between volume and pitch, be careful to avoid associating high and low sounds with volume (loudness).
- Collaborate with the music teacher to develop an instructional plan to support sound energy.

Topics	Learning Targets/Skills	Benchmarks	Vocabulary
<p><b>Weeks 16-17</b></p> <p><b>Motion of Objects</b></p>	<p><i>Investigate that things move in different ways, such as fast, slow, etc.</i></p> <p><b>Students will:</b></p> <ul style="list-style-type: none"> <li>• <b>demonstrate and describe</b> the different ways their bodies and other objects move (e.g., roll, fly, crawl, swim, bounce, hop, run, waddle, wiggle, sway, tumble, pounce, walk, jump, skip).</li> <li>• <b>describe</b> the speed at which things move (fast and slow).</li> <li>• <b>investigate</b> different directions of motion (e.g., forward, backward, upward, downward, sideways, back-and-forth, up and down, in a circle, zigzag, straight).</li> <li>• <b>record</b> predictions, observations and results of movement investigations in pictorial or written form in a science notebook.</li> <li>• <b>describe</b> what has been learned after carefully observing the movement of objects and hearing the observations of others.</li> </ul>	<p><b>SC.K.P.12.1</b></p> <p>Embedded                      Nature of Science                      SC.K.N.1.2                      SC.K.N.1.3                      SC.K.N.1.5</p>	<p><b>back-and-forth</b>  <b>backward</b>  <b>direction</b>  <b>downward</b>  <b>fast</b>  <b>forward</b>  <b>motion</b>  <b>movement</b>  <b>slow</b>  <b>upward</b>  <b>zigzag</b></p>

**Teacher Hints for “Motion of Objects”:**

- It takes a push or pull to cause motion.
- A push or pull may require contact.
  - Throwing a ball is a push that requires contact.
  - Propelling a boat forward through the water is a push that requires contact.
  - Picking up an object is a pull that requires contact.
  - Tightening a belt is a pull that requires contact.
- A push or pull does not always require contact.
  - Repulsion of two magnets demonstrates a push that does not require contact.
  - Gravity acting on an object demonstrates a pull that does not require contact.
  - Blowing air through a straw demonstrates a push of an object without touching it.
  - Sucking air through a straw demonstrates a pull on an object without touching it.
- Include the exploration of magnetism when instructing motion. Like poles of two magnets will repel (push). Opposite poles of two magnets will attract (pull).

<p><b>Weeks 18-19</b></p> <p><b>Forces and Changes in Motion</b></p>	<p><i>Observe that a push or a pull can change the way an object is moving.</i></p> <p><b>Students will:</b></p> <ul style="list-style-type: none"> <li>• <b>describe</b> the position of an object (e.g., on, in, above, below, under, between, before, after, beside).</li> <li>• <b>collaborate</b> with a partner to discuss ways to change an object's motion.</li> <li>• <b>demonstrate</b> ways to make an object change position/move.</li> <li>• <b>predict</b> how a push and pull will change an object's speed and/or direction.</li> <li>• <b>investigate</b> how push and pull can change the speed or direction of an object's movement (fast, slow, back and forth, up and down).</li> <li>• <b>record</b> predictions, observations and results of push and pull investigations in pictorial or written form in a science notebook.</li> <li>• <b>describe</b> what has been learned after carefully observing the change in an object's motion and hearing the observations of others.</li> </ul>	<p><b>SC.K.P.13.1</b></p> <p>Embedded Nature of Science SC.K.N.1.1 SC.K.N.1.2 SC.K.N.1.3 SC.K.N.1.5</p>	<p>above after before below beside between direction in motion movement on pull push speed under</p>
<p><b>Teacher Hints for “Forces and Changes in Motion”:</b></p> <ul style="list-style-type: none"> <li>• Continue exploration of magnetism when instructing pushes/pulls and changes in motion.</li> <li>• When an object moves it always changes position and sometimes changes direction.</li> <li>• Additional words that can describe the position of an object may include, but are not limited to, the following: over, beneath, to the right/left of, and behind.</li> <li>• Force is required to make an object move. Young children know that it requires a push or pull to move things. They also realize that they do not always have enough force in their own strength to move some objects.</li> </ul>			
<p><b>Week 20</b></p> <p><b>Gravity</b></p>	<p><i>Explore the Law of Gravity by investigating how objects are pulled toward the ground unless something holds them up.</i></p> <p><b>Students will:</b></p> <ul style="list-style-type: none"> <li>• <b>predict</b> what will happen to objects when supports that are holding them up are removed.</li> <li>• <b>collaborate</b> as a class about how to collect data during a gravity investigation (e.g., record simple descriptive sentences/phrases, record a video, collect tally marks, draw pictures).</li> <li>• <b>investigate</b> how objects are pulled toward the ground unless something holds them up.</li> <li>• <b>record</b> predictions, observations and results of a gravity investigation in pictorial or written form in a science notebook.</li> <li>• <b>identify</b> gravity as the reason objects are pulled toward the ground (fall) when they are not held up by something.</li> <li>• <b>describe</b> what has been learned after carefully observing the effects of gravity and hearing the observations of others.</li> </ul>	<p><b>SC.K.E.5.1</b></p> <p>Embedded Nature of Science SC.K.N.1.1 SC.K.N.1.2 SC.K.N.1.3 SC.K.N.1.5</p>	<p>gravity hold up pull down</p>
<p><b>Teacher Hints for “Gravity”:</b></p> <ul style="list-style-type: none"> <li>• When objects fall, they are being pulled by gravity.</li> <li>• Gravity is a non-contact force that is difficult for young students to conceptualize. However, they have been fascinated by gravity since they started dropping objects repeatedly off of their high chairs.</li> <li>• This concept is rooted in a cause/effect relationship and students should be comfortable expressing the relationship.</li> </ul>

**Teacher Hints for “Day and Night Sky”:**

- The sun is the closest star to the Earth.
- Understanding that day and night repeats on a regular basis is foundational to the understanding that day and night is caused by the rotation of Earth on its axis. Earth’s rotation on its axis is taught in Grade 4.
- Students may make observations that the shape of the moon appears to change over time. Teachers may want to consider making models of the different shapes of the moon that have been observed (e.g., clay, Oreo cookies, construction paper).
- Tracking and recording the observable shapes of the moon is no longer a requirement outlined in the map. This concept will be taught in Grade 4.
- Sort pictures seen in the day or night sky.
- Record objects seen in both the day and night sky.

<b>Weeks 23-24</b>  <b>Size and Distance</b>	<p><i>Observe that things can be big and things can be small as seen from Earth.</i></p> <p><b>Students will:</b></p> <ul style="list-style-type: none"> <li>• <b>compare</b> the size of an object on the ground to one seen in the sky (e.g., airplane, hot air balloon, parachute, bird, kite).</li> <li>• <b>explain</b> how the object looks smaller in the sky even though it does not change in size.</li> <li>• <b>discuss</b> how objects appear to get smaller the farther away they get and larger the closer they get.</li> <li>• <b>make observations</b> of objects found in space (sun, moon, and stars).</li> </ul>	<b>SC.K.E.5.5</b>  Embedded Nature of Science SC.K.N.1.2 SC.K.N.1.3 SC.K.N.1.5	<b>appear big (large)</b> <b>distance far away</b> <b>nearby size small</b>
	<p><i>Observe that some objects are far away and some are nearby as seen from Earth.</i></p> <p><b>Students will:</b></p> <ul style="list-style-type: none"> <li>• <b>compare</b> the apparent size of stars to the apparent size of the sun and moon as seen from Earth.</li> <li>• <b>explain</b> the distance of some objects in the day and night sky in relation to Earth (stars are farther away from Earth than the sun and moon).</li> <li>• <b>explain</b> that the moon looks larger than the stars because it is closer to Earth (nearby) even though it is not larger and vice versa (far away).</li> <li>• <b>explain</b> that the sun looks larger than the other stars because it is closer to Earth (nearby) even though it is smaller than some of the other stars and vice versa (far away).</li> </ul>	<b>SC.K.E.5.6</b>  Embedded Nature of Science SC.K.N.1.2 SC.K.N.1.5	

**Teacher Hints for “Size and Distance”:**

- Students need to define what makes an object big and what makes an object small. According to the class’s definition, students should be able to accurately sort all kinds of objects. Eventually we want students to realize that size is relative.
- Students need to define what determines when an object is far away and when an object is nearby. According to the class’s definition, students should be able to accurately categorize all kinds of objects. Eventually we want students to realize that distance is relative.
- The farther away something gets, the smaller it appears to become; the closer something gets the larger it appears to become. The object never actually changes in size. This is intuitive to us but not to students.
- The relationship between size and distance is foundational to understanding concepts of size and distance as they relate to space (this concept is further developed in Grade 3).
- The moon is closer to Earth than the stars. The moon appears to be larger than the stars. The relationship that exists between size and distance is what explains why the moon appears to be larger than the stars even though it is not.
- Consider discussing size and distance relationships accurately represented in fiction and non-fiction literature.

## Formative Assessment Strategies Science K-5

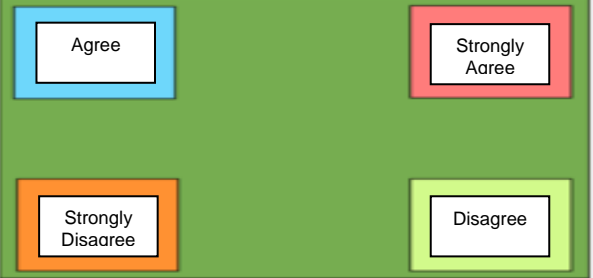

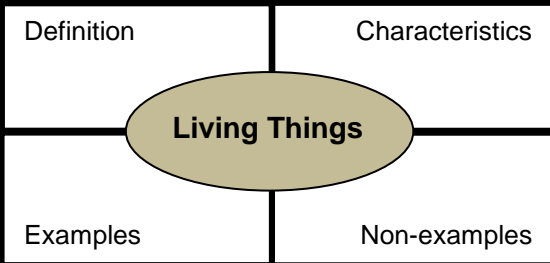

Adapted from Page Keeley's *Science Formative Assessment: 75 Practical Strategies for Linking Assessment, Instruction, and Learning*

Strategy Name	Description	Additional Information				
<p><b>A &amp; D Statements</b></p>	<p><i>A &amp; D Statements</i> analyze a set of “fact or fiction” statements. First, students may choose to agree or disagree with a statement or identify whether they need more information. Students are asked to describe their thinking about why they agree, disagree, or are unsure. In the second part, students describe what they can do to investigate the statement by testing their ideas, researching what is already known, or using other means of inquiry.</p>	<table border="1"> <thead> <tr> <th data-bbox="1386 363 1709 406">Statement</th> <th data-bbox="1709 363 1995 406">How can you find out?</th> </tr> </thead> <tbody> <tr> <td data-bbox="1386 406 1709 581"> <p>All magnets have 2 poles.  <input type="checkbox"/> agree      <input type="checkbox"/> disagree  <input type="checkbox"/> it depends    <input type="checkbox"/> not sure</p> <p>My thoughts:</p> </td> <td data-bbox="1709 406 1995 581"></td> </tr> </tbody> </table>	Statement	How can you find out?	<p>All magnets have 2 poles.  <input type="checkbox"/> agree      <input type="checkbox"/> disagree  <input type="checkbox"/> it depends    <input type="checkbox"/> not sure</p> <p>My thoughts:</p>	
Statement	How can you find out?					
<p>All magnets have 2 poles.  <input type="checkbox"/> agree      <input type="checkbox"/> disagree  <input type="checkbox"/> it depends    <input type="checkbox"/> not sure</p> <p>My thoughts:</p>						
<p><b>Agreement Circles</b></p>	<p><i>Agreement Circles</i> provide a kinesthetic way to activate thinking and engage students in scientific argumentation. Students stand in a circle as the teacher reads a statement. While standing, they face their peers and match themselves up in small groups of opposing beliefs. Students discuss and defend their positions. After some students defend their answers, the teacher can ask if others have been swayed. If so, stand up. If not, what are your thoughts? Why did you disagree? After hearing those who disagree, does anyone who has agreed want to change their minds? This should be used when students have had some exposure to the content.</p>	<p style="text-align: center;"><b>Energy</b></p> <ol style="list-style-type: none"> <li>1. Energy is a material that is stored in an object.</li> <li>2. When energy changes from one form to another, heat is usually given off.</li> <li>3. Energy can never be created or destroyed.</li> <li>4. Something has to move in order to have energy.</li> </ol>				
<p><b>Annotated Student Drawings</b></p>	<p><i>Annotated Student Drawings</i> are student-made, labeled illustrations that visually represent and describe students' thinking about scientific concepts. Younger students may verbally describe and name parts of their drawings while the teacher annotates them.</p>					

Strategy Name	Description	Additional Information
<p><b>Card Sorts</b></p>	<p><i>Card Sorts</i> is a sorting activity in which students group a set of cards with pictures or words according to certain characteristics or category. Students sort the cards based on their preexisting ideas about the concepts, objects, or processes on the cards. As students sort the cards, they discuss their reasons for placing each card into a designated group. This activity promotes discussion and active thinking.</p>	
<p><b>Chain Notes</b></p>	<p><i>Chain Notes</i> is a strategy that begins with a question printed at the top of a paper. The paper is then circulated from student to student. Each student responds with one to two sentences related to the question and passes it on to the next student. A student can add a new thought or build on a previous statement.</p>	<p><b>What is Matter?</b></p> <p>Matter is all around us. Matter makes up everything. Matter has volume and takes up space. You can feel and see matter.</p>
<p><b>Commit and Toss</b></p>	<p><i>Commit and Toss</i> is a technique used to anonymously and quickly assess student understanding on a topic. Students are given a question. They are asked to answer it and explain their thinking. They write this on a piece of paper. The paper is crumpled into a ball. Once the teacher gives the signal, they toss, pass, or place the ball in a basket. Students take turns reading their "caught" response. Once all ideas have been made public and discussed, engage students in a class discussion to decide which ideas they believe are the most plausible and to provide justification for the thinking.</p>	<p><b>Solids and Holes</b></p> <p>Lance has a thin, solid piece of material. He places it in water. It floats. He takes the material out and punches holes all the way through it. What do you think Lance will observe when he puts the material with holes back in the water?</p> <ul style="list-style-type: none"> <li>A. It will sink.</li> <li>B. It will barely float.</li> <li>C. It will float the same as it did before the holes were punched.</li> <li>D. It will neither sink nor float. It will bob up and down in the water.</li> </ul> <p>Explain your thinking. Describe the reason for the answer you selected.</p>
<p><b>Concept Card Mapping</b></p>	<p><i>Concept Card Mapping</i> is a variation on concept mapping. Students are given cards with the concepts written on them. They move the cards around and arrange them as a connected web of knowledge. This strategy visually displays relationships between concepts.</p>	

Strategy Name	Description	Additional Information												
<p><b>Concept Cartoons</b></p>	<p><i>Concept Cartoons</i> are cartoon drawings that visually depict children or adults sharing their ideas about common everyday science. Students decide which character in the cartoon they agree with most and why. This formative assessment is designed to engage and motivate students to uncover their own ideas and encourage scientific argumentation.</p> <p>Concept Cartoons are most often used at the beginning of a new concept or skill. These are designed to probe students' thinking about everyday situations they encounter that involve the use of science. Not all cartoons have one "right answer." Students should be given ample time for ideas to simmer and stew to increase cognitive engagement.</p>	 <p><a href="http://www.pixton.com">www.pixton.com</a></p>												
<p><b>Data Match</b></p>	<p><i>Data Match</i> provides students with a data set from a familiar investigation and several statements about data. Students use evidence from the data to determine which statements are accurate. This strategy provides students with an opportunity to consider what constitutes evidence, practice interpreting data, and consider how confident they are in interpreting results of an inquiry.</p>	<table border="1" data-bbox="1388 610 2003 824"> <thead> <tr> <th>Where We Put the Ice Cube</th> <th>How Many Minutes It Took to Melt</th> </tr> </thead> <tbody> <tr> <td>On the blacktop in the sun</td> <td>3</td> </tr> <tr> <td>On the blacktop in the shade</td> <td>7</td> </tr> <tr> <td>On the grass</td> <td>10</td> </tr> <tr> <td>On the metal side</td> <td>2</td> </tr> <tr> <td>On the dirt underneath the slide</td> <td>5</td> </tr> </tbody> </table> <p><b>Which of these statements match your results?</b>  The ice cube on the grass took longest to melt.  The metal slide was hotter than the dirt underneath the slide.  The ice cube melted faster on the blacktop in the sun than on the shaded blacktop.  Ice placed on dark things melts faster than ice placed on light things.  Ice melts faster on some surfaces than on others.</p>	Where We Put the Ice Cube	How Many Minutes It Took to Melt	On the blacktop in the sun	3	On the blacktop in the shade	7	On the grass	10	On the metal side	2	On the dirt underneath the slide	5
Where We Put the Ice Cube	How Many Minutes It Took to Melt													
On the blacktop in the sun	3													
On the blacktop in the shade	7													
On the grass	10													
On the metal side	2													
On the dirt underneath the slide	5													
<p><b>Fact First Questioning</b></p>	<p><i>Fact First Questioning</i> is a higher-order questioning technique used to draw out students' knowledge. It takes a factual "what" question and turns it into a deeper "how" or "why" question. Teachers state the fact first and then ask students to elaborate, enabling deeper thinking processes that lead to a more enduring understanding of science concepts.</p>	<table border="1" data-bbox="1388 1052 2003 1338"> <thead> <tr> <th>Examples of Fact First Questions</th> </tr> </thead> <tbody> <tr> <td>Glucose is a form of food for plants. Why is glucose considered a food for plants?</td> </tr> <tr> <td>A cell is called the basic unit of life. Why is a cell called the basic unit of life?</td> </tr> <tr> <td>The patterns of stars in the night sky stay the same. Why do the patterns of stars in the night sky stay the same?</td> </tr> <tr> <td>Sandstone is a sedimentary rock. Why is sandstone considered a sedimentary rock?</td> </tr> </tbody> </table>	Examples of Fact First Questions	Glucose is a form of food for plants. Why is glucose considered a food for plants?	A cell is called the basic unit of life. Why is a cell called the basic unit of life?	The patterns of stars in the night sky stay the same. Why do the patterns of stars in the night sky stay the same?	Sandstone is a sedimentary rock. Why is sandstone considered a sedimentary rock?							
Examples of Fact First Questions														
Glucose is a form of food for plants. Why is glucose considered a food for plants?														
A cell is called the basic unit of life. Why is a cell called the basic unit of life?														
The patterns of stars in the night sky stay the same. Why do the patterns of stars in the night sky stay the same?														
Sandstone is a sedimentary rock. Why is sandstone considered a sedimentary rock?														

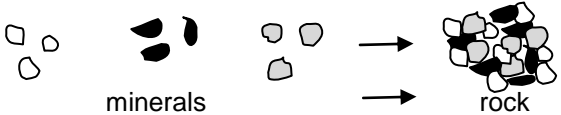

Strategy Name	Description	Additional Information																															
<p><b>Familiar Phenomenon Probes</b></p>	<p><i>Familiar Phenomenon Probes</i> is a strategy involving two-tiered questions consisting of a selected response section and a justification for the selected response. They engage students in thinking about scientific ideas related to the phenomenon and committing to a response that matches their thinking. The distracters (wrong choices) include commonly held misconceptions that children have in science.</p>	<p><b>What's in the Bubbles?</b>  Hannah is boiling water in a glass tea kettle. She notices large bubbles forming on the bottom of the kettle that rise to the top and wonders what is in the bubbles. She asks her family what they think, and this is what they may say:</p> <p><b>Dad:</b> They are bubble of heat.  <b>Calvin:</b> The bubbles are filled with air.  <b>Grandma:</b> The bubbles are an invisible form of water.  <b>Mom:</b> The bubbles are empty. There is nothing inside them.  <b>Lucy:</b> The bubbles contain oxygen and hydrogen that separated from the water.</p> <p><b>Which person do you most agree with and why? Explain your thinking.</b></p>																															
<p><b>First Word-Last Word</b></p>	<p><i>First Word-Last Word</i> is a variation of acrostic poetry. Students construct statements about a concept or topic before and after instruction that begins with the designated letter of the alphabet. The acrostic format provides a structure for them to build their idea statements off different letters that make up the topic word.</p>	<table border="1"> <thead> <tr> <th data-bbox="1377 558 1703 586">First Word-Photosynthesis</th> <th data-bbox="1703 558 2009 586">Last Word-Photosynthesis</th> </tr> </thead> <tbody> <tr> <td data-bbox="1377 586 1703 651"><u>P</u>lants make their own food.</td> <td data-bbox="1703 586 2009 651">Producers such as plants use energy from the sun to make their food.</td> </tr> <tr> <td data-bbox="1377 651 1703 695"><u>H</u>appens in cells</td> <td data-bbox="1703 651 2009 695">Happens in cells that have structures called chloroplasts</td> </tr> <tr> <td data-bbox="1377 695 1703 738"><u>O</u>ther animals eat plants.</td> <td data-bbox="1703 695 2009 738">Organisms that eat plants are using energy from the plant.</td> </tr> <tr> <td data-bbox="1377 738 1703 803"><u>T</u>he roots take up food and water.</td> <td data-bbox="1703 738 2009 803">The roots take water up to the leaves where it reacts with sunlight and carbon dioxide.</td> </tr> <tr> <td data-bbox="1377 803 1703 868"><u>O</u>xxygen is breathed in through leaves.</td> <td data-bbox="1703 803 2009 868">Oxygen is given off during photosynthesis and is used by plants and animals for respiration.</td> </tr> <tr> <td data-bbox="1377 868 1703 912"><u>S</u>unlight makes food for plants.</td> <td data-bbox="1703 868 2009 912">Sunlight provides the energy so plants can make food.</td> </tr> <tr> <td data-bbox="1377 912 1703 977"><u>Y</u>ou can't make your own food.</td> <td data-bbox="1703 912 2009 977">You need to have cells with chloroplast and chlorophyll to make food.</td> </tr> <tr> <td data-bbox="1377 977 1703 1021"><u>N</u>eeds water, sunlight, oxygen, and minerals</td> <td data-bbox="1703 977 2009 1021">Needs water, carbon dioxide and sunlight to make food</td> </tr> <tr> <td data-bbox="1377 1021 1703 1065"><u>T</u>he leaves, roots, and stems are all parts that make food.</td> <td data-bbox="1703 1021 2009 1065">The leaf is the food making part.</td> </tr> <tr> <td data-bbox="1377 1065 1703 1109"><u>H</u>ave to have sun and water</td> <td data-bbox="1703 1065 2009 1109">Have to have sunlight, water, and carbon dioxide</td> </tr> <tr> <td data-bbox="1377 1109 1703 1136"><u>E</u>nergy comes from the sun.</td> <td data-bbox="1703 1109 2009 1136">Energy comes from sunlight.</td> </tr> <tr> <td data-bbox="1377 1136 1703 1180"><u>S</u>unlight turns plants green.</td> <td data-bbox="1703 1136 2009 1180">Sunlight is trapped in the chlorophyll.</td> </tr> <tr> <td data-bbox="1377 1180 1703 1224"><u>I</u>t happens in all plants.</td> <td data-bbox="1703 1180 2009 1224">It is necessary life process for all plants.</td> </tr> <tr> <td data-bbox="1377 1224 1703 1268"><u>S</u>oil is used by plants to make food.</td> <td data-bbox="1703 1224 2009 1268">Soil holds the water for plants and gives some minerals.</td> </tr> </tbody> </table>		First Word-Photosynthesis	Last Word-Photosynthesis	<u>P</u> lants make their own food. Strategy Name	Description	Additional Information
<p><b>Fist to Five</b></p>	<p><i>Fist to Five</i> asks students to indicate the extent of their understanding of a scientific concept by holding up a closed fist (no understanding), one finger (very little understanding), and a range up to five fingers (understand completely and can easily explain it to someone else). <i>Fist to Five</i> provides a simple feedback opportunity for all students in a class to indicate when they do not understand a concept or skill and need additional support for their learning.</p>	 <p>I do not understand it.    I understand some of it.    I understand most of it.    I understand it completely.    I understand it and can explain it.</p>
<p><b>Four Corners</b></p>	<p><i>Four Corners</i> is a kinesthetic strategy. The four corners of the classroom are labeled: Strongly Agree, Agree, Disagree and Strongly Disagree. Initially, the teacher presents a science statement to students and asks them to go to the corner that best aligns with their thinking. Students then pair up to defend their thinking with evidence. The teacher circulates and records student comments. Next, the teacher facilitates a whole group discussion. Students defend their thinking and listen to others' thinking before returning to their desks to record their new understanding.</p>	
<p><b>Frayer Model</b></p>	<p><i>Frayer Model</i> is a strategy that graphically organizes prior knowledge about a concept into an operational definition, characteristics, examples, and non-examples. It provides students with the opportunity to clarify what they are thinking about the concept and to communicate their understanding.</p>	
<p><b>Friendly Talk Probes</b></p>	<p><i>Friendly Talk Probes</i> is a strategy that involves a selected response section followed by justification. The probe is set in a real-life scenario in which friends talk about a science-related concept or phenomenon. Students are asked to pick the person they most agree with and explain why. This can be used to engage students at any point during a unit. It can be used to access prior knowledge before the unit begins, or assess learning throughout and at the close of a unit.</p>	<p><b>Talking about Gravity</b></p> <p>Two friends are talking about gravity.</p> <p>Ben says, "Gravity needs atmosphere or air. If there is no air or atmosphere, there will be no gravity."</p> <p>Kelly says, "Gravity doesn't need an atmosphere or air. If there is no air or atmosphere, there will still be gravity."</p> <p>Which friend do you agree with? _____</p> <p>Describe your thinking. Explain why you agree with one friend and disagree with the other.</p>

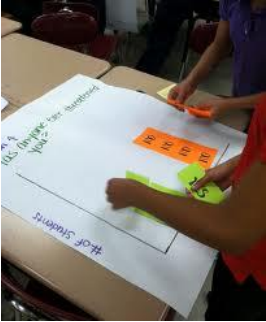

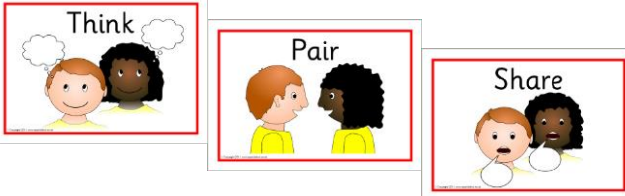

Strategy Name	Description	Additional Information																
<p><b>Give Me Five</b></p>	<p><i>Give Me Five</i> is a simple, quick technique for inviting and valuing public reflection and welcoming feedback from the students. Students should be given time to quietly reflect, perhaps through a quick write. Teacher selects five “volunteers” to share their reflection.</p> <p>NOTE: Deliberately select students for the purpose of reinforcing correct understanding and addressing misconceptions.</p>	<ol style="list-style-type: none"> <li>1. What was the most significant learning you had during today’s lesson?</li> <li>2. How “in the zone” do you feel right now as far as understanding the concept?</li> <li>3. How did today’s lesson help you better understand the concept?</li> <li>4. What was the high point of this week’s activities on the concept?</li> <li>5. How well do you think today’s science discussion worked in improving your understanding of the concept?</li> </ol>																
<p><b>Human Scatterplot</b></p>	<p><i>Human Scatterplot</i> is a quick, visual way for teacher and students to get an immediate classroom snapshot of students’ thinking and the level of confidence students have in their ideas. Teachers develop a selective response question with up to four answer choices. Label one side of the room with the answer choices. Label the adjacent wall with a range of low confidence to high confidence. Students read the question and position themselves in the room according to their answer choice and degree of confidence in their answer.</p>																	
<p><b>I Used to Think... But Now I Know...</b></p>	<p><i>I Used to Think...But Now I Know</i> is a self-assessment and reflection exercise that helps students recognize if and how their thinking has changed at the end of a sequence of instruction. An additional column can be added to include...<i>And This Is How I Learned It</i> to help students reflect on what part of their learning experiences helped them change or further develop their ideas.</p>	<table border="1" data-bbox="1386 747 2005 836"> <thead> <tr> <th>I USED TO THINK...</th> <th>BUT NOW I KNOW...</th> </tr> </thead> <tbody> <tr> <td> </td> <td> </td> </tr> </tbody> </table>	I USED TO THINK...	BUT NOW I KNOW...														
I USED TO THINK...	BUT NOW I KNOW...																	
<p><b>Justified List</b></p>	<p><i>Justified List</i> begins with a statement about an object, process, concept or skill. Examples that fit or do not fit the statement are listed. Students check off the items on the list that fit the statement and provide a justification explaining their rule or reasons for their selections. This can be done individually or in small group. Small groups can share their lists with the whole class for discussion and feedback. Pictures or manipulatives can be used for English-language learners.</p>	<table border="1" data-bbox="1386 925 2005 1282"> <thead> <tr> <th colspan="2">Making Sound</th> </tr> </thead> <tbody> <tr> <td colspan="2">All of the objects listed below make sounds. Put an X next to the objects you think involve vibration in producing sound.</td> </tr> <tr> <td>___ guitar strings</td> <td>___ drum      ___ piano</td> </tr> <tr> <td>___ dripping faucet</td> <td>___ flute      ___ wind</td> </tr> <tr> <td>___ hammer</td> <td>___ crumpled paper</td> </tr> <tr> <td>___ thunderstorm</td> <td>___ barking dog</td> </tr> <tr> <td>___ screeching brakes</td> <td></td> </tr> <tr> <td colspan="2">Explain your thinking. What “rule” or reasoning did you use to decide which objects involve vibration?</td> </tr> </tbody> </table>	Making Sound		All of the objects listed below make sounds. Put an X next to the objects you think involve vibration in producing sound.		___ guitar strings	___ drum      ___ piano	___ dripping faucet	___ flute      ___ wind	___ hammer	___ crumpled paper	___ thunderstorm	___ barking dog	___ screeching brakes		Explain your thinking. What “rule” or reasoning did you use to decide which objects involve vibration?	
Making Sound																		
All of the objects listed below make sounds. Put an X next to the objects you think involve vibration in producing sound.																		
___ guitar strings	___ drum      ___ piano																	
___ dripping faucet	___ flute      ___ wind																	
___ hammer	___ crumpled paper																	
___ thunderstorm	___ barking dog																	
___ screeching brakes																		
Explain your thinking. What “rule” or reasoning did you use to decide which objects involve vibration?																		

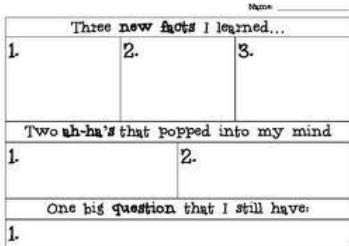

Strategy Name	Description	Additional Information						
<b>K-W-L Variations</b>	<p><i>K-W-L</i> is a general technique in which students describe what they <b>Know</b> about a topic, what they <b>Want</b> to know about a topic, and what they have <b>Learned</b> about the topic. It provides an opportunity for students to become engaged with a topic, particularly when asked what they want to know. <i>K-W-L</i> provides a self-assessment and reflection at the end, when students are asked to think about what they have learned. The three phrases of <i>K-W-L</i> help students see the connections between what they already know, what they would like to find out, and what they learned as a result.</p>	<table border="1"> <thead> <tr> <th data-bbox="1381 204 1589 280">K This is what I already <b>KNOW</b></th> <th data-bbox="1589 204 1797 280">W This is what I <b>WANT</b> to find out</th> <th data-bbox="1797 204 2005 280">L This is what I <b>LEARNED</b></th> </tr> </thead> <tbody> <tr> <td data-bbox="1381 280 1589 410"></td> <td data-bbox="1589 280 1797 410"></td> <td data-bbox="1797 280 2005 410"></td> </tr> </tbody> </table>	K This is what I already <b>KNOW</b>	W This is what I <b>WANT</b> to find out	L This is what I <b>LEARNED</b>			
K This is what I already <b>KNOW</b>	W This is what I <b>WANT</b> to find out	L This is what I <b>LEARNED</b>						
<b>Learning Goals Inventory (LGI)</b>	<p><i>Learning Goals Inventory (LGI)</i> is a set of questions that relate to an identified learning goal in a unit of instruction. Students are asked to “inventory” the learning goal by accessing prior knowledge. This requires them to think about what they already know in relation to the learning goal statement as well as when and how they may have learned about it. The <i>LGI</i> can be given back to students at the end of the instructional unit as a self-assessment and reflection of their learning.</p>	<table border="1"> <thead> <tr> <th data-bbox="1381 508 2005 557">What do you think the learning goal is about?</th> </tr> </thead> <tbody> <tr> <td data-bbox="1381 557 2005 621">List any concepts or ideas you are familiar with related to this learning goal.</td> </tr> <tr> <td data-bbox="1381 621 2005 686">List any terminology you know of that relates to this goal.</td> </tr> <tr> <td data-bbox="1381 686 2005 743">List any experiences you have had that may have helped you learn about the ideas in this learning goal.</td> </tr> </tbody> </table>	What do you think the learning goal is about?	List any concepts or ideas you are familiar with related to this learning goal.	List any terminology you know of that relates to this goal.	List any experiences you have had that may have helped you learn about the ideas in this learning goal.		
What do you think the learning goal is about?								
List any concepts or ideas you are familiar with related to this learning goal.								
List any terminology you know of that relates to this goal.								
List any experiences you have had that may have helped you learn about the ideas in this learning goal.								
<b>Look Back</b>	<p><i>Look Back</i> is a recount of what students learned over a given instructional period of time. It provides students with an opportunity to look back and summarize their learning. Asking the students “how they learned it” helps them think about their own learning. The information can be used to differentiate instruction for individual learners, based on their descriptions of what helped them learn.</p>	<table border="1"> <thead> <tr> <th data-bbox="1381 784 1694 816">What I Learned</th> <th data-bbox="1694 784 2005 816">How I Learned it</th> </tr> </thead> <tbody> <tr> <td data-bbox="1381 816 1694 865"></td> <td data-bbox="1694 816 2005 865"></td> </tr> </tbody> </table>	What I Learned	How I Learned it				
What I Learned	How I Learned it							
<b>Muddiest Point</b>	<p><i>Muddiest Point</i> is a quick-monitoring technique in which students are asked to take a few minutes to jot down what the most difficult or confusing part of a lesson was for them. The information gathered is then to be used for instructional feedback to address student difficulties.</p>	<p><b>Scenario:</b> Students have been using a hand lens to make observations of the details on a penny. <i>Teacher states, “I want you to think about the muddiest point for you so far when it comes to using a hand lens. Jot it down. I will use the information you give me to think about ways to help you better use the hand lens in tomorrow’s lesson.”</i></p>						

Strategy Name	Description	Additional Information				
<p><b>Odd One Out</b></p>	<p><i>Odd One Out</i> combines similar items/terminology and challenges students to choose which item/term in the group does not belong. Students are asked to justify their reasoning for selecting the item that does not fit with the others. <i>Odd One Out</i> provides an opportunity for students to access scientific knowledge while analyzing relationships between items in a group.</p>	<p>Properties of Matter: In each set, circle the <b>Odd One Out</b> and describe why it does not fit with the others.</p> <table border="1" data-bbox="1381 256 2005 378"> <thead> <tr> <th data-bbox="1381 256 1692 280">Which Is the Odd One?</th> <th data-bbox="1692 256 2005 280">Why Is It the Odd One Out?</th> </tr> </thead> <tbody> <tr> <td data-bbox="1381 280 1692 378">           weight density length color         </td> <td data-bbox="1692 280 2005 378"></td> </tr> </tbody> </table>	Which Is the Odd One?	Why Is It the Odd One Out?	weight density length color	
Which Is the Odd One?	Why Is It the Odd One Out?					
weight density length color						
<p><b>Paint The Picture</b></p>	<p><i>Paint the Picture</i> visually depicts students' thinking about an idea in science without using any annotations. This involves giving the students a question and asking them to design a visual representation that reveals their thinking and answers the question. <i>Paint the Picture</i> provides an opportunity for students to organize their thinking and represent their thinking in a creative, unique visual format.</p>	<p>What role do minerals play in the formation of a rock?</p> 				
<p><b>Partner Speaks</b></p>	<p><i>Partner Speaks</i> provides students with an opportunity to talk through an idea or question with another student before sharing with a larger group. When ideas are shared with the larger group, pairs speak from the perspective of their partner's ideas. This encourages careful listening and consideration of another's ideas.</p>	<p><b>Today we are going to investigate how objects float and sink in water.</b></p> <ul style="list-style-type: none"> <li>- <i>What do you think affects whether an object floats or sinks in water?</i></li> <li>- <i>What can you do to change how an object floats or sinks?</i></li> </ul> <p><b>Turn to your partner and take turns discussing ideas.</b></p>				
<p><b>Pass the Question</b></p>	<p><i>Pass the Question</i> provides an opportunity for students to collaborate in activating their own ideas and examining other students' thinking. Students begin by working together in pairs to respond to a question. Time is allotted for partial completion of their responses. When the time is up, they exchange their partially completed response with another pair. Students are provided time to finish, modify, add to, or change it as they deem necessary. Pairs then group to give feedback to each other on the modifications.</p>	<p>What are the phases of the moon? Can sound travel through a solid? What is the difference between temperature and humidity? Are science tools helpful? How can you measure matter?</p>				
<p><b>A Picture Tells a Thousand Words</b></p>	<p><i>A Picture Tells a Thousand Words</i> is a technique where students are digitally photographed during an inquiry-based activity or investigation. They are given the photograph and asked to describe and annotate what they were doing and learning in the photo. Images can be used to spark student discussions, explore new directions in inquiry, and probe their thinking as it relates to the moment the photograph was taken.</p>					

Strategy Name	Description	Additional Information
<b>Question Generating</b>	<i>Question Generating</i> is a technique that switches roles from the teacher as the question generator to the student as the question generator. The ability to formulate good questions about a topic can indicate the extent to which a student understands ideas that underlie the topic. This technique can be used any time during instruction. Students can exchange or answer their own questions, revealing further information about the students' ideas related to the topic.	<b>Question Generating Stems:</b> <ul style="list-style-type: none"> <li>• Why does ___?</li> <li>• How does ___?</li> <li>• What if ___?</li> <li>• What could be the reason for ___?</li> <li>• What would happen if ___?</li> <li>• How does ___ compare to ___?</li> <li>• How could we find out if ___?</li> </ul>
<b>Sticky Bars</b>	<i>Sticky Bars</i> is a technique that helps students recognize the range of ideas that students have about a topic. Students are presented with a short answer or multiple-choice question. The answer is anonymously recorded on a Post-it note and given to the teacher. The notes are arranged on the wall or whiteboard as a bar graph representing the different student responses. Students then discuss the data and what they think the class needs to do in order to come to a common understanding.	
<b>Thinking Logs</b>	<i>Thinking Logs</i> is a strategy that informs the teacher of the learning successes and challenges of individual students. Students choose the thinking stem that would best describe their thinking at that moment. Provide a few minutes for students to write down their thoughts using the stem. The information can be used to provide interventions for individuals or groups of students as well as match students with peers who may be able to provide learning support.	<ul style="list-style-type: none"> <li>• I was successful in...</li> <li>• I got stuck...</li> <li>• I figured out...</li> <li>• I got confused when...so I...</li> <li>• I think I need to redo...</li> <li>• I need to rethink...</li> <li>• I first thought...but now I realize...</li> <li>• I will understand this better if I...</li> <li>• The hardest part of this was...</li> <li>• I figured it out because...</li> <li>• I really feel good about the way...</li> </ul>
<b>Think-Pair-Share</b>	<p><i>Think-Pair-Share</i> is a technique that combines thinking with communication. The teacher poses a question and gives individual students time to think about the question. Students then pair up with a partner to discuss their ideas. After pairs discuss, students share their ideas in a small-group or whole-class discussion. (Kagan)</p> <p>NOTE: Varying student pairs ensures diverse peer interactions.</p>	

Strategy Name	Description	Additional Information						
<p><b>Traffic Light Cups</b></p>	<p><i>Traffic Light Cups</i> is a monitoring strategy that can be used at any time during instruction to help teachers gauge student understanding. The colors indicate whether students have full, partial, or minimal understanding. Students are given three different-colored cups, asked to self-assess their understanding about the concept or skill they are learning, and display the cup that best matches their understanding.</p>	<table border="1"> <tr> <td data-bbox="1381 196 1514 245"><b>Green</b></td> <td data-bbox="1514 196 2005 245">I understand this very well.</td> </tr> <tr> <td data-bbox="1381 245 1514 310"><b>Yellow</b></td> <td data-bbox="1514 245 2005 310">I understand most of it but could use a little help.</td> </tr> <tr> <td data-bbox="1381 310 1514 358"><b>Red</b></td> <td data-bbox="1514 310 2005 358">Help. I don't get it.</td> </tr> </table>	<b>Green</b>	I understand this very well.	<b>Yellow</b>	I understand most of it but could use a little help.	<b>Red</b>	Help. I don't get it.
<b>Green</b>	I understand this very well.							
<b>Yellow</b>	I understand most of it but could use a little help.							
<b>Red</b>	Help. I don't get it.							
<p><b>Two-Minute Paper</b></p>	<p><i>Two-Minute Paper</i> is a quick way to collect feedback from students about their learning at the end of an activity, field trip, lecture, video, or other type of learning experience. Teacher writes two questions on the board or on a chart to which students respond in two minutes. Responses are analyzed and results are shared with students the following day.</p>	<ul style="list-style-type: none"> <li>• What was the most important thing you learned today?</li> <li>• What did you learn today that you didn't know before?</li> <li>• What important question remains unanswered for you?</li> <li>• What would help you learn better tomorrow?</li> </ul>						
<p><b>Two Stars and a Wish</b></p>	<p><i>Two Stars and a Wish</i> is a way to balance positive and corrective feedback. The first sentence describes two positive commendations for the student's work. The second sentence provides one recommendation for revision. This strategy could be used teacher-to-student or student-to-student.</p>	 <p>The image shows a 'Two Stars and a Wish' form. It includes a 'Name' field, a 'Topic' field, and three rows for feedback. The first two rows are marked with yellow stars and are for 'Two Stars', while the third row is marked with a red star and a pencil icon and is for 'a Wish'. The form is titled 'two stars and a wish' with a star icon.</p>						
<p><b>3-2-1</b></p>	<p><i>3-2-1</i> is a technique that provides a structured way for students to reflect upon their learning. Students respond in writing to three reflective prompts. This technique allows students to identify and share their successes, challenges, and questions for future learning. Teachers have the flexibility to select reflective prompts that will provide them with the most relevant information for data-driven decision making.</p>	<p><b>Sample 1</b></p> <ul style="list-style-type: none"> <li>• <b>3 – Three</b> key ideas I will remember</li> <li>• <b>2 – Two</b> things I am still struggling with</li> <li>• <b>1 – One</b> thing that will help me tomorrow</li> </ul> <p><b>Sample 2</b></p>  <p>The image shows a 'Sample 2' form with three sections. The first section is 'Three new facts I learned...' with three numbered boxes (1, 2, 3). The second section is 'Two ah-ha's that popped into my mind' with two numbered boxes (1, 2). The third section is 'One big question that I still have' with one numbered box (1). The form is titled 'Three new facts I learned...' and 'Two ah-ha's that popped into my mind'.</p>						

# DIGITAL PROGRAM ACCESS INFORMATION

# Appendix B

The Elementary Science Department highly recommends the use of the following digital resources purposes of planning, delivery of instruction, formative and summative assessment, and/or professional development. Access information and a brief description of each is provided.

## Science Fusion Think Central ([www.thinkcentral.com](http://www.thinkcentral.com))

*Username/Login:* district username

*Password:* district password

### Access the HMH Think Central tile through V-Portal.

**Science Fusion Think Central** platform provides teachers with digital access to the district-adopted textbook resource. It contains digital lessons and labs that parallel the hard copy materials providing students with multiple exposures to the context of science content. A wealth of additional instructional resources organized by grade, unit, and lesson are available for easy teacher access.

**If you need access assistance, contact Deb Lookingbill (Extension 20571)**

**If you need technical assistance, call 800-323-9239.**

## The Happy Scientist ([www.thehappyscientist.com](http://www.thehappyscientist.com))

**Contact your *Elementary Curriculum Cadre Science Leader* for assistance with access information (username and password).**

**The Happy Scientist** website is a rich collection of videos, photographs, experiments, questions of the day, blogs, and SO much more. The content is aligned to the NGSSS for science and is easy to navigate.

**If you need assistance with science experiments and videos, email [rob@krampf.com](mailto:rob@krampf.com).**

**If you need assistance with the website, email [membersupport@krampf.com](mailto:membersupport@krampf.com).**

## CPALMS ([www.cpalms.org](http://www.cpalms.org))

### iCPALMS ([www.cpalms.org](http://www.cpalms.org))

**CPALMS** is an online toolbox of information, vetted resources, and interactive tools that helps educators effectively implement teaching standards. It is the State of Florida's official source for standards information and course descriptions.

**ICPALMS** is a powerful portal linking teachers across the state to online tools for planning and implementing instruction. Based on adopted standards governing what students must learn, these tools will, in turn, connect educators with thousands of existing resources for teaching science, making this an innovative system like no other.

**For user support by phone, call 855-826-8236.**

## FCAT Explorer

### Florida Achieves Focus ([www.florida-achieves.com](http://www.florida-achieves.com))

**FCAT Explorer *Science Station*** provides comprehensive practice for the science benchmarks tested on the elementary science FCAT 2.0. The program is organized into four areas: Physical/Chemical, Earth/Space, Life/Environmental, and Scientific Thinking. Support includes glossary terms, hints, and incorrect answer feedback. *Science Station* also features innovative vocabulary building exercises.

**Focus** is a Florida Department of Education website offering online mini-assessments for science. For each benchmark in science, Focus offers a 5-item test and a 5-item retest. Currently mini-assessments for science are available for Grade 5 only at the elementary level.

**Students and teachers can use their FCAT Explorer sign-in name and password to begin using Focus immediately. If you need help with your**

# GLOSSARY OF TERMS

**The Science Curriculum Map has been developed by teachers for ease of use during instructional planning. Terminology found within the framework of the curriculum map is defined below.**

**Next Generation Sunshine State Standards (NGSSS):** a set of content and process science standards that define with specificity what teachers should teach and students should know and be able to do; adopted by the Florida State Board of Education in 2008

**NGSSS Body of Knowledge:** the broadest organizational structure used to group content and concepts within the curriculum map and include the following: Nature of Science, Earth Science, Physical Science and Life Science (also known as *Reporting Category*)

**Standard/Big Idea:** an overarching organizational structure used to describe the scope of a selected group of benchmarks; *for example, The Characteristics of Science Knowledge, Earth Systems and Patterns, Forms of Energy, and Interdependence*

**Unit of Study:** an overarching organizational sub-structure comprised of a collection of topics used to group content and concepts for a more narrow focus

**Topics:** a grouping of benchmarks and skills that form a subset of scientific concepts covered in each unit of study

**Benchmarks:** the required NGSSS expectations presented in the course descriptions posted on CPALMS by FLDOE

**Learning Targets/Skills:** the content knowledge, processes, and enabling skills that will ensure successful mastery of the benchmarks

**Vocabulary:** the content terminology and other academic language and phrases that support mastery of the learning targets and skills; for teacher- and student-use alike

**Pacing:** a recommendation of time frames for initial delivery of instruction and assessment in preparation for grade 5 Science FCAT 2.0

**Teacher Hints:** a listing of considerations when planning for instruction; may include suggestions or ideas for review

**Resource Alignment:** a listing of available, high quality and benchmark-aligned materials including labs, strategies, lessons, and videos from textbook and other media sources

**Formative Assessment Strategies:** techniques that can be used before, during, and after instruction to evaluate student learning

**The District Science Office recommends that all students engage in hands-on, minds-on science experiences daily.**
